

Junior AV Designer / Consultant – Job Description

Due to continued growth and expansion, our organisation is currently looking for Trainee / Junior AV Consultant. The successful candidate will be responsible for Audio Visual systems design on a range of challenging projects.

The role is focused on installed Audio Visual systems and will also require knowledge and experience of ICT and control systems typically found in AV installations.

Working alongside our Senior Consulting team, the role will include the preparation and co-ordination of Audio Visual design advice for the development of projects across a broad range of market sectors. It will also require project management skills both during the design and implementation phases.

Ideally the candidate may have worked on office fit-out, refurbishment or relocation projects and have exposure to RIBA work stages.

You will work within our IT and Audio Visual Consultancy Group and be based in our London office.

Key Responsibilities:

Technical / Consulting

- Assist in engaging with Clients to establish clear AV & IT Briefs and technology requirements
- Assist in providing input into technology strategy documents
- Assist in designing & specifying Audio Visual systems
- Assist in providing M&E, architectural & IT information to the professional team on the AV design
- Assist in producing detailed tender documentation and pricing schedules
- Assist in coordinating & managing the competitive procurement process
- Assist in project managing appointed contractors through project delivery including approving design submittals, site inspections, final commissioning & acceptance and client handover
- Assist in overseeing contractor off-site testing works and AV system programming
- Assist in developing QA processes for managing implementation phases of AV & IT projects

Research / Technology & Innovation

- Assist with research efforts into emerging technology and future trends and provide regular updates to directors and team
- Assist with establishing regular updates and briefings from key system manufacturers
- Assist with exploring areas of technology innovation and potential areas of service differentiation

Experience

Experience in designing or knowledge of AV systems such as:

- Meeting rooms/ boardrooms / training rooms
- Auditoriums
- TV studios and digital workflows
- Public address systems
- Video and audio conferencing
- Digital signage / Public Information systems
- Control systems / home automation
- Television distribution - satellite, terrestrial, cable (traditional/IPTV)
- Key areas of experience include corporate office buildings, schools and universities, convention centres, hotels, high quality residences
- Good understanding of the latest digital systems
- Good understanding of integrating AV into enterprise IT environments
- AutoCAD 20xx intermediate level
- Microsoft Office

Qualifications

- Ideally degree level educated or relevant industry experience
- Appropriate technology qualification such as Info Comm CTS-I / CTS-D
